

# SWAC Library Newsletter, Boulder Campus July 2021

## Spotlight on New Books:

*Zang Fu Pattern Identification Study Guide* provides an in-depth description and analysis of the physiological characteristics, common etiological factors and pathological patterns of each of the zàng fù organs. Part I explores the five zàng or 'solid' yin organs, and Part II the six fù or 'hollow' yang organs. Similar patterns are differentiated from one another.

Part III examines the most common compound or complex patterns involving pathology between two or more associated organs. Part IV addresses more difficult questions that require deeper exploration. Rounding out the book in Part V is a comprehensive self-examination with 200 questions and answers based on the material in the text.
